# The title of my paper

Andrew N. Other <sup>1\*</sup> Fred T. Secondauthor <sup>1†</sup> I. Ken Groupleader <sup>1,2</sup>

<sup>1</sup>The first affiliation

 $^2 {\rm The}$  second affiliation

## **5 Key Points:**

1

2

3

4

7

- List up to three key points (at least one is required)
  - Key Points summarize the main points and conclusions of the article
- Each must be 100 characters or less with no special characters or punctuation

<sup>\*</sup>Andrew's thanks

 $<sup>^{\</sup>dagger}\mathrm{Current}$  address: Some other place, Germany

Corresponding author: I. Ken Groupleader, groupleader@fancy.university.com

#### 9 Abstract

- <sup>10</sup> A good abstract will begin with a short description of the problem being addressed, briefly
- describe the new data or analyses, then briefly states the main conclusion(s) and how
- <sup>12</sup> they are supported and uncertainties.

## <sup>13</sup> Plain language summary

<sup>14</sup> Some journals require a plain language summary. See: https://publications.agu.org/author-

- <sup>15</sup> resource-center/text-requirements/#abstract
- <sup>16</sup> Suggested section heads

#### 17 **1** Introduction

The main text should start with an introduction. Except for short manuscripts (such as comments and replies), the text should be divided into sections, each with its own heading.

Headings should be sentence fragments and do not begin with a lowercase letter or number. Capitalize the first letter of each word (except for prepositions, conjunctions, and articles that are three or fewer letters).

#### 24 **2** Materials and Methods

<sup>25</sup> Here is text on Materials and Methods.

Do not use bulleted lists; enumerated lists are okay. Use #. for list for a cleaner
 LaTeX output.

<sup>28</sup> 1. First element

30

29 2. Second element

## 2.1 A descriptive heading about methods

Please use ONLY \citet and \citep for reference citations. DO NOT use other cite commands (e.g., \cite, \citeyear, \nocite, \citealp, etc.). Example \citet and \citep: ... as shown by Levitus et al. (2012), Nuncio, Luis, and Yuan (2011) and Raphael (2004) ... as shown by (Levitus et al., 2012), (Nuncio et al., 2011), (Raphael, 2004). ... has been shown

<sup>35</sup> (e.g., Levitus et al., 2012; Nuncio et al., 2011; Raphael, 2004).

## 36 **3 Data**

37	Or section title might be a descriptive heading about data
38	As of 2018 we recommend use of the TrackChanges package to mark revisions. The
39	trackchanges package adds five new LaTeX commands:
40	$\note[editor]{The note}$
41	$\ \ \ \ \ \ \ \ \ \ \ \ \ \ \ \ \ \ \ $
42	$\add[editor]{Text to add}$
43	\remove[editor]{Text to remove}
44	$\change[editor]{Text to remove}{Text to add}$
45	complete documentation is here: http://trackchanges.sourceforge.net/
46	4 Results
47	Or section title might be a descriptive heading about the results
48	Enter Figures and Tables near as possible to where they are first mentioned: DO
49	NOT USE \psfrag or \subfigure commands. DO NOT USE \newcommand, \renewcommand,
50	or $\mathbb{Q}$ .
52	Example table
54	AGU prefers the use of {sidewaystable} over {landscapetable} as it causes fewer
55	problems.
56	If using numbered lines, please surround equations with $\begin{linenomath*}{}$
57	$\end{linenomath*}$

$$y|f \sim g(m,\sigma) \tag{1}$$

#### 72 Notation

a + b Notation Definition	here
---------------------------	------

 $e = mc^2$  Equation in German-born physicist Albert Einstein's theory of special rela-

- $_{75}$  tivity that showed that the increased relativistic mass (m) of a body comes from
- The energy of motion of the body—that is, its kinetic energy (E)—divided by the

<sup>77</sup> speed of light squared  $(c^2)$ .

#### 78 Acknowledgments

The acknowledgments must list: A statement that indicates to the reader where the data supporting the conclusions can be obtained (for example, in the references, ta-

- <sup>81</sup> bles, supporting information, and other databases).
- All funding sources related to this work from all authors
- Any real or perceived financial conflicts of interests for any author
